

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-13 (Canceled).

Claim 14 (Currently Amended): ~~An~~ A machine readable information storage recording medium embodied as a recordable optical disc for access by use with an optical disc drive, wherein said recordable optical disc has an outline of two-adhesive substrates, and comprises a center hole, a clamp area around the center hole, and a read-out face around the clamp area, said read-out face is located at one of the two-adhesive substrates, the recordable optical disc comprises a spiral track on which sectors are placed, and data can be recorded on or reproduced from the sectors using a laser, said data including control information and video object data, the information ~~storage~~ recording medium comprising:

a data area storing:

a plurality of error correction code blocks including the video object data,
said video object data being configured to have at least one of video object
units,

wherein a predetermined number of sectors form each error correction code
block, and each of said sectors has a predetermined size; and

a control information recording area storing said control information, the control
information managing the video object data and including an AV file information table
having a first area storing object stream information, and a second area storing AV file
information describing information on the video object data, the AV file information
including a plurality of object information, and a plurality of object information search
pointers associated with the plurality of object information, wherein:

an error correction code block address relates to the predetermined number of said sectors, said video object data being allocated with an integral multiple of said predetermined number of said sectors,

each said object information includes time map information including time map general information, one or more time entries, and one or more object unit entries, and

time map general information in said object information includes information indicating a number of the time entries,

wherein the control information is provided to control recording, playing back, or editing the video object by an information recording/reproducing apparatus, the video object data is accessed according to the control information.

Claim 15 (Previously Presented): An information recording method for recording information on an information storage medium including:

a data area configured to store:

a plurality of error correction code blocks including video object data,
said video object data being configured to have at least one of video object units,

wherein a predetermined number of sectors form each error correction code block, and each of said sectors has a predetermined size, and

a control information recording area configured to store control information for managing the video object data, the control information including an AV file information table having a first area configured to store object stream information, and a second area configured to store AV file information configured to describe information on the video object data, the AV file information including a plurality of object information, and a

plurality of object information search pointers associated with the plurality of object information, wherein:

an error correction code block address relates to the predetermined number of said sectors, said video object data being allocated with an integral multiple of said predetermined number of sectors,

each said object information includes time map information including time map general information, one or more time entries, and one or more object unit entries, and

time map general information in said object information includes information indicating a number of the time entries,

the information recording method comprising:

generating the video object data:

recording the generated video object data into the data area;

generating the control information; and

recording the generated control information, including the plurality of object information, into the control information recording area.

Claim 16 (Previously Presented): An information reproducing method for reproducing information recorded on an information storage medium that includes,

a data area including:

a plurality of error correction code blocks including video object data,

said video object data having at least one of video object units,

wherein a predetermined number of sectors form each error correction code block, and each of said sectors has a predetermined size, and

a control information recording area including control information for managing the video object data, the control information including an AV file information table having a

first area including object stream information, and a second area including AV file information describing information on the video object data, the AV file information including a plurality of object information, and a plurality of object information search pointers associated with the plurality of object information, wherein:

an error correction code block address relates to the predetermined number of said sectors, said video object data being allocated with an integral multiple of said predetermined number of said sectors,

each said object information includes time map information including time map general information, one or more time entries, and one or more object unit entries, and

time map general information in said object information includes information indicating a number of the time entries,

the information reproducing method comprising:

reproducing the control information, including the plurality of object information, from the control information recording area; and

reproducing the video object data from the data area based on the reproduced control information.

Claim 17 (Previously Presented): An information reproducing apparatus for reproducing information recorded on an information storage medium that includes a data area including:

a plurality of error correction code blocks including video object data, said video object data having at least one of the object units,

wherein a predetermined number of sectors form each error correction code block, and each of said sectors has a predetermined size, and

a control information recording area including control information for managing the video object data, the control information including an AV file information table having a first area including object stream information, and a second area including AV file information describing information on the video object data, the AV file information including a plurality of object information, and a plurality of object information search pointers associated with the plurality of object information, wherein:

an error correction code block address relates to the predetermined number of said sectors, said video object data being allocated with an integral multiple of said predetermined number of said sectors,

each said object information includes time map information including time map general information, one or more time entries, and one or more object unit entries, and

time map general information in said object information includes information indicating a number of the time entries,

the information reproducing apparatus comprising:

a first reproducer configured to reproduce the control information, including the plurality of object information, from the control information recording area; and

a second reproducer configured to reproduce video object data from the data area based on the control information reproduced by the first reproducer.

Claim 18 (Previously Presented): An information recording apparatus for recording information on an information storage medium including:

a data area configured to store:

a plurality of error correction code blocks including video object data,

said video object data being configured to have at least one of video object units,

wherein a predetermined number of sectors form each error correction code block, and each of said sectors has a predetermined size, and

a control information recording area configured to store control information for managing the video object data, the control information including an AV file information table having a first area configured to store object stream information, and a second area configured to store AV file information configured to describe information on the video object data, the AV file information including a plurality of object information, and a plurality of object information search pointers associated with the plurality of object information, wherein:

an error correction code block address relates to the predetermined number of said sectors, said video object data being allocated with an integral multiple of said predetermined number of sectors,

each said object information includes time map information including time map general information, one or more time entries, and one or more object unit entries, and

time map general information in said object information includes information indicating a number of the time entries,

the information recording apparatus comprising:

a first generator configured to generate the video object data;

a second generator configured to generate the control information;

a recording unit configured to record the generated video object data into the data area; and

the recording unit further configured record the generated control information, including the plurality of object information, into the control information recording area.

Claim 19 (Currently Amended): ~~An~~ A machine readable information storage ~~recording~~ medium embodied as a recordable optical disc for access by use ~~with~~ an optical disc drive, wherein said recordable optical disc has an outline of two-adhesive substrates each having 0.6 mm thickness, and comprises a center hole, a clamp area around the center hole, a lead-in area around the clamp area, and a read-out face around the lead-in area, said read-out face is located at one of the two-adhesive substrates and the one substrate is made of a material or polycarbonate through which a laser can pass, the one substrate of said read-out face comprises a spiral track on which sectors are placed, and data can be recorded on or reproduced from the sectors using the laser, said data including control information and video object data, the information storage ~~recording~~ medium comprising:

a data area storing:

a plurality of error correction code blocks including the video object data,
said video object data being configured to have at least one of video object
units,

wherein a predetermined number of sectors from each error correction code
block, and each of said sectors has a predetermined size; and

a control information recording area storing said control information, the control
information managing the video object data and including an AV file information table
having a first area storing object stream information, and a second area storing AV file
information describing information on the video object data, the AV file information
including a plurality of object information, and a plurality of object information search
pointers associated with the plurality of object information, wherein:

an error correction code block address relates to the predetermined number of said
sectors, said video object data being allocated with an integral multiple of said predetermined
number of said sectors,

each said object information includes time map information including time map general information, one or more time entries, and one or more object unit entries, and

time map general information in said object information includes information indicating a number of the time entries,

wherein the control information is provided to control recording, playing back, or editing the video object data by an information recording/reproducing apparatus, the video object data is accessed according to the control information.
